1. This communication is in response to applicant's communication received on December 11, 2006.
2. Claims 1-8 are allowed.
3. The following is an examiner's statement of reasons for allowance: As pointed out by the applicant, in the response filed on December 11, 2006, certain key features of the claimed invention are not taught or fairly suggested by the prior art. Specifically, the prior art fails to show a method of measuring a rotational speed of a pulse activated electric motor including the step of fully activating the pulse activated electric motor for a defined measuring time by a circuit element provided for pulsing at a time interval to be determined and during the time interval, measuring a frequency of current ripples, the frequency being proportional to the rotational speed. The device includes a circuit element; a current proportional voltage measuring device connected to the circuit element and amplifier connected to a side of the circuit element and a plurality of filters connected to the side of the circuit element and an evaluation unit for determining a frequency of current ripples of a current flowing in a measured phase in which the pulse activated motor is fully activated. Because none of the

prior art teaches or suggests this element, this feature, taken together with the other limitations of the claims renders the claims allowable over the prior art.

4. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jay M. Patidar whose telephone number is 571-272-2265. The examiner can normally be reached on M-Thur 7:00-5:30.

The fax number for the organization where this application or proceeding is assigned is 703-872-9306.
